

### Info Sheet 3

## **Erasmus+ - Strategic Partnership Project „QualiProSH Electro“ – Business field specific qualification for the Second-Hand sector „Specialist for used electrical appliance“**

The Erasmus+ - project „QualiProSH Electro“ is a cooperation of 6 partner institutions out of 5 European countries (Germany, Austria, Finland, Slovenia and Bulgaria). Since September 2014 they work together and develop based on the results of the previous Leonardo-da-Vinci projects “QualiProSecondHand” and “QualiProSH II” a European qualification concept “specialist for used electrical appliance” and additional VET products especially for the Second-Hand sector.

In line with the Erasmus+ project in the partner countries there were national concepts developed and tested due to the specific contexts and based on the development of the European qualification concept “specialist for used electrical appliance” and based on the existing quality standards. The European qualification concept is basis for implementation and adaptation in and at the VET-systems in all European countries. In this way there shall be enabled the possibility of comparison of the qualification. Furthermore there were additionally to the already existing 5 modules 6 specific qualification modules – potential learning-/teaching material included – developed. Also the core content of the 11 modules were established as webinars on the background of the need of increasing digital learning offers, that includes a guideline for the use of webinars.

They are complemented by an assessment instrument for the identification of the competencies of the trainees, to ensure the most efficient qualification.

The new modules are:

- Transport of used electrical appliances
- Storage of used electrical appliances
- Cleaning and Repair of used electrical appliances
- Dismantling and Disposal of used electrical appliances
- Social Skills I (personal competencies)
- Social Skills II (employee and customer related skills)

additional the existing 5 modules:

- Administration of business processes,
- Receipt of Goods,
- Akquisition of Goods and Customers,
- Sales and
- Organisation of Goods receipt

Basis for the development of the qualification and the additional VET products were on the one hand working process related results of the analysis and on the other hand the structure of the already existing qualification modules out of the previous projects. A guideline for the implementation of the qualification on a national level completes the project.
